

Flash Disinfector – User's Guide

Having problems opening your Flash drive? Your computer might be infected with malware preventing the Flash drive from opening. Flash Disinfector is a Flash Malware removing tool created by courtesy of sUBs.

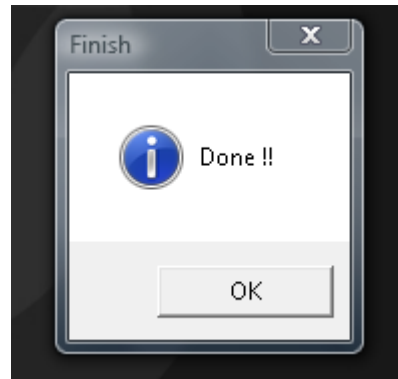

1. Download the latest version of Flash Disinfector from the following website:
http://www.techsupportforum.com/sectools/sUBs/Flash_Disinfector.exe. Save the file to your desktop and start the program by double-clicking the Flash_Disinfector icon on your desktop.

2. When the program starts it will ask you to plug in any Flash drives into the machine. Plug in your Flash drive and click ok.

3. Your desktop will vanish and then reappear. This is normal behavior of the tool. Wait until the program has finished scanning and click ok.

4. The removal of malware from your Flash drive is complete. You should reboot your machine and use the Flash drive as normal.
