Connecting to FoxNet

Mac OS X:

Click on the wireless icon in the top right of the screen to bring up the available networks. Then click on FoxNet.

A login box should pop up asking for your credentials; enter your Marist account and password and choose whether or not to remember the network.

You will be prompted to accept the FoxNet security certificate.
This requires an account with local administrative privileges so you will be prompted to enter your local account password. This is not your Marist account.

Once connected to FoxNet, open your web browser to be redirected to the following webpage where you must read and agree to Marist’s acceptable use policy:

After reading and accepting the acceptable use policy your computer is ready to use the network. You should be able to browse to wherever you want to go. If you cannot get anywhere, try turning your wireless off and back on again, or try rebooting your computer.
