DIRECTOR, SOFTWARE DEVELOPMENT PROGRAM, COMPUTER SCIENCE
Onkar P. Sharma, Ph.D.
(845) 575-3000, ext. 3610 or 2523
onkar.sharma@marist.edu

MISSION AND OBJECTIVES
The 31-credit Master of Science in Computer Science/Software Development (SD) program is designed to provide advanced knowledge and experience in the various disciplines of computer science to individuals who hold a bachelor’s degree in computer science, mathematics, physics, engineering, or a closely allied field.

A natural extension of the undergraduate program in Computer Science, Marist’s SD program prepares its students for a career in industry, government, or education. Individuals already employed within the industry acquire the advanced professional expertise necessary for success in today’s rapidly changing technological environment. This latter group consists of applications and systems programmers, systems developers, database designers, technical managers, network specialists, and others who wish to broaden their understanding of the computer-science field, particularly in the area of software development.

Primary areas of emphasis include object-oriented methodologies; software design and development; systems programming; database design and management; networking and distributed systems; theoretical aspects of computer science; graphics, animation, and game design; and artificial intelligence and robotics. The program focuses on both theoretical and practical aspects of computer science. Team building and collaborative skills are emphasized in courses entailing projects. Independent problem-solving and analytical thinking skills, which are so vital in the discipline of computer science, are integrated throughout the curriculum.

ADVANCED TECHNOLOGY SUPPORT
Marist College is one of the 25 most technologically advanced campuses in America. This distinction has been awarded to Marist by both the Princeton Review and Forbes. The criteria included the breadth of the computer-science and information-technology curriculum, equipment for student use, wireless internet access on campus, and support for handheld computing, among other things.

Marist has a longstanding partnership with IBM: the IBM-Marist Joint Study has helped Marist to develop an advanced technology platform which is among the best in higher education.

Through a National Science Foundation Grant, an Internet2 high-performance network connection and a collaborative grid of advanced internet applications are available to Marist.

Many state-of-the-art computing labs are available throughout the campus for student use.

Marist College is a recipient of a major grant from the New York State Office of Science, Technology and Academic Research to spur growth and development of businesses and industry using technology. The Marist Center for Collaborative and On-Demand Computing, established through the grant and in collaboration with local businesses, including IBM, offers advanced internship and research opportunities.
APPLICATION REQUIREMENTS

A baccalaureate degree from an accredited college or university with a GPA of 2.75 or higher is required for admission to the graduate program in computer science. Additionally, applicants should submit the following:

- A completed graduate application and application fee
- Official copies of all undergraduate and graduate transcripts
- An updated résumé specifying programming languages known.

Admissions requirements for international students include:

- Submission of iBT TOEFL/IELTS score;
- Bank statement and affidavit of support;
- Recommendation letters.

Formal admission to the master’s degree program will be granted to students who have satisfied these requirements. Some students may, however, be permitted to enroll in graduate courses in a non-matriculated status upon satisfactory evidence of specific prerequisites. Questions concerning mathematical/computer science competency and non-matriculated status should be addressed to the Program Director.

MATRICULATION STATUS

Applicants who satisfy all admissions requirements are admitted as matriculated students. Applicants who are required to complete undergraduate prerequisite courses are admitted as either matriculated or non-matriculated students at the discretion of the Program Director. Occasionally, conditional admission is granted; students must meet the specified conditions to continue in the program.

DEGREE REQUIREMENTS

To qualify for the Master of Science in Computer Science, students must matriculate and complete 31 credits as described below. Degree requirements must be satisfied within seven years of acceptance into the program, with a cumulative index of no less than 3.0. Requests for an extension of the seven-year limitation must be made in writing to the Program Director. Each student is expected to complete the requirements as outlined in the catalog in effect at the time of admission to Marist College. Students may choose to follow a subsequently revised catalog.

All courses leading to the master’s degree in Software Development are offered in the late afternoon or in the evening. Part-time students are limited to registering for one course during their first semester unless prior approval is granted by the Program Director. Full-time study is defined by a semester load of at least nine credits.

ADVISEMENT

The Director of the Software Development Program serves as the advisor for all students in the program. The Program Director provides advice on course sequencing, approves all registration requests, and performs graduation audits. Students should discuss any questions or concerns they may have about their studies with the Director.
PREREQUISITES
All applicants are expected to be proficient in computer programming, computer architecture, and mathematics. The level of competence can ordinarily be demonstrated by appropriate courses in the areas noted below.

**Computer Science**
- Programming and Data Structures in JAVA
- Assembly Language Programming
- Logic Design and Computer Architecture
- Advanced Data Structures

**Mathematics**
- Discrete Mathematics
- Probability/Statistics
- Differential and Integral Calculus

**Graduate Courses in Software Development**

**Course Requirements**
Candidates for the Master of Science in Computer Science/Software Development must complete the following:

<table>
<thead>
<tr>
<th>Core Courses (15 credits)</th>
<th>Semester Offered</th>
</tr>
</thead>
<tbody>
<tr>
<td>MSCS 510 Software Design and Development</td>
<td>Spring</td>
</tr>
<tr>
<td>MSCS 530 Algorithms</td>
<td>Spring</td>
</tr>
<tr>
<td>MSCS 560 Computer Networks I</td>
<td>Fall</td>
</tr>
<tr>
<td>MSCS 610 Advanced Theory of Programming Languages</td>
<td>Spring</td>
</tr>
<tr>
<td>MSCS 620 Distributed Systems</td>
<td>Fall</td>
</tr>
</tbody>
</table>

**Laboratory Courses (1 Credit)**
- MSCS 561 Computer Networks Laboratory Fall, Spring

**Elective Courses (12 credits/select 4 courses)**
- MSCS 515 Operating Systems Fall
- MSCS 518 Compiler Design Spring
- MSCS 521 Computer Architecture Spring
- MSCS 531 Automata, Computability & Formal Languages Fall
- MSCS 542 Database Management Spring
- MSCS 550 Artificial Intelligence Fall
- MSCS 555 Computer Graphics I Fall
Additional Electives (offered when there is sufficient demand)

- **MSCS 596-600** Special Topics in Computer Science  Spring
- **MSCS 640** Distributed Database Systems
- **MSCS 655** Computer Graphics II
- **MSCS 660** Computer Networks II
- **MSCS 670** Applied Artificial Intelligence
- **MSCS 720** Thesis

Project Course (3 credits)

- **MSCS 710** Project  Fall

Internship Courses

- **MSCS 690, 691, 692** Graduate Internship in Software Development  All Semesters

Although not required, students may elect to pursue a concentration in Systems Software by taking elective courses in operating systems, compiler design, and computer architecture; or a concentration in Applications by taking elective courses in database management, artificial intelligence, and computer graphics. Elective courses may be selected from the software-development courses listed in the graduate catalog, including the Thesis and Special Topics courses. Internship courses do not satisfy the Elective requirement.
Master of science in Computer Science/Software Development

Description of Courses

MSCS 510
Software Design and Development
3 Credits
This course introduces a formal approach to the design and development of software systems. The various phases of the software development process are covered and students are introduced to an object-oriented design methodology using Unified Modeling Language. The course is project-driven and student teams design and implement a complex software system that utilizes a well-designed user interface. Java is the language of development and Java Swing will be covered. (Offered: spring semester)
Prerequisites: CMSC 335 Advanced Data Structures

MSCS 515
Operating Systems
3 Credits
Operating systems provide service to users to simplify their programming and data processing tasks, and they also manage systems resources to assure their efficient utilization. This course mainly presents operating systems as resource managers. In order to gain hands-on practical experience, students design and implement a multiprogramming operating system as an integral part of the course. (Offered: fall semester)
Prerequisites: CMSC 335 Advanced Data Structures; CMSC 415 Computer Architecture

MSCS 518
Compiler Design
3 Credits
Both the design and implementation of compilers will be studied. The lexical, syntactic, and semantic analyses of formal languages will be developed. Theoretical tools such as finite-state and push-down automata, and regular and context-free grammars will be presented as needed. Additionally, symbol-table construction and code-generation techniques will be required to develop a compiler for a selected subset of an instructor-specified small programming language. (Offered: spring semester)
Prerequisites: CMSC 335 Advanced Data Structures; CMSC 415 Computer Architecture

MSCS 521
Computer Architecture
3 Credits
The objective of this course is to introduce concepts related to the organization and structure of the major hardware components. The functions and implementations of, and communication between, the major components of a computer system are described. Developments to make special types of processing more efficient or reliable such as pipe lining, array processing, and multicore processors are covered. Special emphasis is placed on RISC and multiprocessor architectures. (Offered: spring semester)
Prerequisites: CMSC 330 Logic Design; MATH 221 Differential and Integral Calculus

MSCS 530
Algorithms
3 Credits
This course will develop students’ abilities as writers and critics of programs. The student will be introduced to a variety of program-design techniques including recursion, heuristics, divide-and-conquer, and dynamic programming. Methods of performance analysis and the theory of NP-completeness will be covered. (Offered: spring semester)
Prerequisite: CMSC 335 Advanced Data Structures

MSCS 531
Automata, Computability & Formal Languages
3 Credits
Formal language theory will be presented, including the Chomsky hierarchy of formal languages with their corresponding grammars and automata. The study of formal
language leads naturally to considerations related to the notion of algorithm and to the nature of the limits of algorithmic computation. Various forms of models of computation will be explored. (Offered: fall semester) Prerequisite: CMSC 335 Advanced Data Structures

MSCS 542
Database Management
3 Credits
A study of the issues related to the design and administration of modern database systems, with special emphasis on relational database systems. This course will study data modeling, query languages, schema refinement and tuning of existing databases, physical implementation of databases, and systems issues in the management of data. (Offered: spring semester) Prerequisites: MATH 250 Discrete Mathematics; CMSC 335 Advanced Data Structures

MSCS 550
Artificial Intelligence
3 Credits
This course introduces students to basic concepts and techniques of artificial intelligence, or intelligent systems, and gives insight into active research areas and applications. Emphasis is placed on representation as a central and necessary concept for work in intelligent systems. (Offered: fall semester) Prerequisite: CMSC 335 Advanced Data Structures

MSCS 555
Computer Graphics I
3 Credits
This course introduces students to all aspects of computer graphics: hardware, software, and applications. In the course, students will learn the basic concepts underlying computer graphics and gain experience with at least one graphical application programming interface. (Offered: fall semester) Prerequisites: CMSC 310 Object-Oriented Programming Using C++; MATH 221 Differential and Integral Calculus

MSCS 560
Computer Networks I
3 Credits
This course will focus on OSI and internet protocols that provide a reliable communication channel over the physical network linking a heterogeneous collection of computing resources. Topics covered include: Switching Techniques, Wireless Protocols, Media Access Control, TCP/IP and multicasting. (Offered: fall semester) Prerequisites: CMSC 415 Computer Architecture; MATH 221 Calculus I; MATH 130 or 330 Probability/Statistics Recommended Corequisite: MSCS 561 Computer Networking Laboratory

MSCS 561
Computer Networks Laboratory
3 Credits
This is a hands-on course in the building and troubleshooting of both peer-to-peer and client/server networks at all levels of the OSI and Internet Network models. The course consists of two halves: the first focuses on networking basics and peer-to-peer networks, the second on client/server networks. Microsoft Windows NT 4.0 combined with the Back Office Small Business Server is the platform for the client/server portion. The objective will be to develop a typical Intranet as would be used by a small business or department that provides web serving, e-mail, proxy/firewall protection, and DNS. This course provides the student with the hands-on knowledge and experience to allow the building, development, and troubleshooting of an Intranet Network for the typical small business or department. (Offered: fall and spring semesters) Corequisite: MSCS 560 Computer Networks I
MSCS
Special Topics
3 Credits

MSCS 596 Systems Software
MSCS 597 Computer Architecture
MSCS 598 Database
MSCS 599 Artificial Intelligence
MSCS 600 Computer Science

Special-topics courses serve as a vehicle by which a division may offer a topical or thematic study not included in the regular course offerings. The specific content is indicated when the course is listed in the schedule of classes. (Offered upon demand or instructor interest in spring semester.)

Prerequisite: Permission of instructor

MSCS 610
Advanced Theory (Structure) of Programming Languages
3 Credits

Data and control abstractions are considered. Advanced control constructs including backtracking and non-determinism are covered. Emphasis is on machine-independent implementation of programming language constructs. (Offered: spring semester)

Prerequisites: CMSC 335 Advanced Data Structures; CMSC 415 Computer Architecture

MSCS 620
Distributed Systems
3 Credits

This course studies Open Standards distributed systems based on the TCP/IP protocol. The course exposes students to Internet addresses, sockets, streams, universal character codes, threads, and Internet protocols like SMTP, HTTP, MIME, etc. The course also investigates several object and service distribution methods like Remote Method Invocation (RMI), Common Object Request Broker (CORBA), Java Spaces, and Jinni. The course pursues a practical approach to these ideas through simple Java programs as well as a larger project written in Java in which small student teams analyze, design, and build a distributed system using software-development practices. (Offered: fall semester)

Prerequisites: MSCS 510 Software Design and Development; MSCS 560 Computer Networks I

MSCS 640
Distributed Database Systems
3 Credits

Consideration of the problems and opportunities inherent in distributed databases on a network computer system. Topics covered include file allocation, directory systems, deadlock detection and prevention, synchronization, query optimization, and fault tolerance.

Prerequisites: MSCS 542 Database Management; CMSC 335 Advanced Data Structures

MSCS 655
Computer Graphics II
3 Credits

This course introduces advanced modeling and viewing techniques in computer graphics such as surface patches, solid modeling, hidden surface removal, ray tracing, radiosity, and animation.

Prerequisite: MSCS 555 Computer Graphics I

MSCS 660
Computer Networks II
3 Credits

The investigation in more depth of some of the topics introduced in Computer Networks I. Among some of the topics chosen by the instructor and the class to be the main concentration for that particular semester: queueing theory, wireless protocols, multimedia, compression, security and encryption.

Prerequisite: MSCS 560 Computer Networks I

MSCS 670
Applied Artificial Intelligence
3 Credits

This course builds upon the first level AI course by concentrating on a limited number of topics from AI, investigating these topics to considerable depth, and emphasizing the design and implementation of software pertaining to these topics. Selection of specific
topics to be pursued will be determined by the instructor.

**Prerequisite:** MSCS 550 Artificial Intelligence

**MSCS 690, 691, 692**

**Graduate Internship in Software Development**

*One, two, and three credits respectively*

The graduate internship will provide advanced professional experience in the field of computer science. This course enables students to integrate the elements of their formal preparation and to apply theoretical concepts to real-world software development. Graduate Internships cannot be used to meet any elective requirements. Arrangements should be made with the graduate director and internship coordinator.

*(Offered fall, spring, and summer semesters)*

**Prerequisites:** Completion of 12 graduate credits and 3.0 GPA

**MSCS 710**

**Project**

*3 Credits*

This is a project-based course. Students will work in teams to analyze, design, and implement a large system chosen from a list of selected projects. Students will utilize the skills gained in previous courses, especially Software Design and Development, in working as a team going through the various phases of the software-development process. Student teams will have milestone presentations, including a final presentation, throughout the course. This course meets on a weekly basis.

*(Offered fall semester)*

**Prerequisites:** Completion of at least 18 credits and MSCS 510 Software Design and Development

**MSCS 720**

**Thesis**

*3 Credits*

Thesis can only be taken by a student who has completed the project course. During the semester prior to enrollment in Thesis, the student must submit a thesis proposal for approval to register for Thesis to his/her project advisor or graduate director six weeks prior to the end of the semester in which the student is enrolled for the project course. If approved, the Thesis advisor, the program director, and the student, acting together, solicit two additional faculty members to act as members of the student’s Thesis Committee. The three faculty members constituting the committee may include not more than one adjunct faculty member. During the semester in which Thesis is taken for credit, the following must take place:

As the thesis course progresses, the student works on his/her thesis under the guidance of his/her thesis advisor. The student meets with his/her advisor periodically, as determined by the latter, to seek guidance and submit progress reports. The student submits the completed thesis to the three faculty members of his/her committee by the tenth week of the semester. The thesis must be found acceptable by the thesis advisor and at least one additional committee member. In the event that revision of the thesis is recommended, it may be necessary to issue an incomplete grade (a grade of X). This grade may be changed at any point in the future after the requirement listed above has been satisfied. The student will then receive a regular grade for Thesis.

**Prerequisite:** MSCS 710 Project
Computer Science/Software Development and Information Systems Faculty

RON COLEMAN Assistant Professor of Computer Science, 2002. Degrees: B.S., The City College of New York; M.S., Ph.D., Polytechnic University. Specialties: Data Mining; Machine Learning; Distributed Systems; Software Design and Development; Game Design and Programming

CRAIG FISHER Associate Professor of Information Systems, 1989. Degrees: B.S., State University of New York at Oswego; M.A., Ball State University; Ph.D., State University of New York at Albany. Specialties: System & Information Concepts; Problem Solving & Programming; Systems Analysis & Design; Database Management

JAN HARRINGTON Assistant Professor of Information Systems, 1989. Degrees: B.S., University of Washington; M.L., University of Washington; Ph.D., Drexel University. Specialties: Data Management; System Architecture; Object-Oriented Technologies

HELEN M. HAYES Assistant Professor of Mathematics and Computer Science, 1983. Degrees: B.A., College of St. Elizabeth; M.S., Fordham University; M.S.C.S., Syracuse University. Specialties: Formal Languages; Computability; Algorithms; Neural Networks

ALAN R. LABOUSEUR Professional Lecturer of Information Technology, 2003. Degrees: B.S., Marist College; M.S., Pace University. Specialties: Database Systems; Web Development; Programming for Business

EITEL J.M. LAURÍA Assistant Professor of Information Systems, 2002. Degrees: B.S., University of Buenos Aires, Argentina; M.B.A., Universidad del Salvador, Argentina / Universidad de Deusto, Spain; Ph.D., SUNY Albany. Specialties: Data Management; Information Decision Systems; Business Intelligence; OLAP; Data Mining; Statistical Machine Learning; Bayesian Belief Networks and their application in Information Technology Implementation

ANNE B. MATHEUS Professional Lecturer in Information Systems and Information Technology; Information Systems Internship Coordinator; Director of Computer Literacy, 2001. Degrees: B.A., Marist College; M.A., Marist College; M.S.C.S., Marist College; A.B.D., SUNY Albany. Specialties: Information Decision Systems; Organizational Studies; Information Quality

NORA MISIOLEK Assistant Professor of Information Systems, 2006. Degrees: B.A., Syracuse University; M.B.A., Syracuse University; Ph.D., Syracuse University. Specialties: Virtual collaboration, innovation management, management information systems, systems analysis and design, virtual organizations as sociotechnical systems, human-computer interaction.
ROGER NORTON  Dean, School of Computer Science and Mathematics, 1980. Novell Certified NetWare Administrator & NetWare Engineer. Degrees: B.S., University of Massachusetts; M.A., Brandeis University; Ph.D., Syracuse University. Specialties: Semantics of Programming Languages; Object-Oriented Programming; Distributed Computing

SHEKHAR PRADHAN  Assistant Professor of Computer Science, 2004. Degrees: Ph.D., University of Maryland, Computer Science; Ph.D., University of Illinois, Philosophy. Specialties: Intelligent Databases, Software Engineering, and Artificial Intelligence

ONKAR P. SHARMA  Professor of Computer Science, 1986; Director, Software Development Program. Degrees: B.S.E., Bihar Institute of Technology, Bihar University, India; M.S.C.S., University of California at Berkeley; Ph.D.C.S., New York University. Specialties: Computer Architecture; Systems Software

JAMES TEN EYCK  Assistant Professor of Computer Science, 1983. Degrees: B.S., Lafayette College; M.S., Syracuse University; Ph.D., Syracuse University. Specialties: Computer Networks; Simulation
